INFORMATION REGARDING WATER SERVICES

All work executed and all pipes and fittings to be connected to the Council's water supply must be strictly in accordance with the provisions of the AS/NZS 3500.1 and Council's requirements.

A person who is not a licensed plumber shall not fit, alter or interfere in any way with water pipes and fittings used or intended or adapted to be used on any premises in connection with the supply of the water of the Council.

Council will install an appropriate backflow prevention and pressure regulating device on information supplied on this form. The customer is responsible for the ongoing maintenance, annual inspection and testing by a suitable qualified plumber and the eventual replacement of the backflow devices. The results of annual inspections and testing must be made available to Council upon request.

The Rural Water Supply Policy CTW-PR004 must be complied with before connection will take place.

Connections will not be made until all fees and charges due, and arrears of fees and charges are paid.

Conditions for a Rural Water Supply

Information for Consumers

The following information is provided for your information in complying with conditions described in Council's Rural Water Supply Policy CTW-PR004. Applicants must read, understand and comply with the conditions as set out in the policy. Compliance is necessary to ensure the integrity of the supply to all consumers.

Any Existing or New Service

Is a storage tank (or tanks) with a minimum total capacity of 20 kilolitres available?

- ☐ Yes ☐ No You must install a tank (or tanks) with a minimum total capacity of 20 kilolitres or the supply will not be made available. See Clause 4.

Does the storage tank inlet(s) discharge to the top of the tank(s)?

- ☐ Yes ☐ No You must alter the plumbing so that the supply discharges to the top of the tank. This is to ensure that there is no possibility of back flow. See clause 10.

Does the storage tank(s) have a minimum 100mm air gap between inlet and overflow?

- ☐ Yes ☐ No You must ensure that a minimum air gap of 100mm is maintained between the level of the inlet to the tank and the overflow. This is to ensure that there is no possibility of back flow. Refer clause 10.

Does the supply line run directly between the metering point and the storage tank(s) with no additional connections?

- ☐ Yes ☐ No You must alter the plumbing so as to eliminate any intermediate connections. Refer to clause 9.

Typical Rural Connection Arrangement
